

How to setup Python interpreter in Pycharm

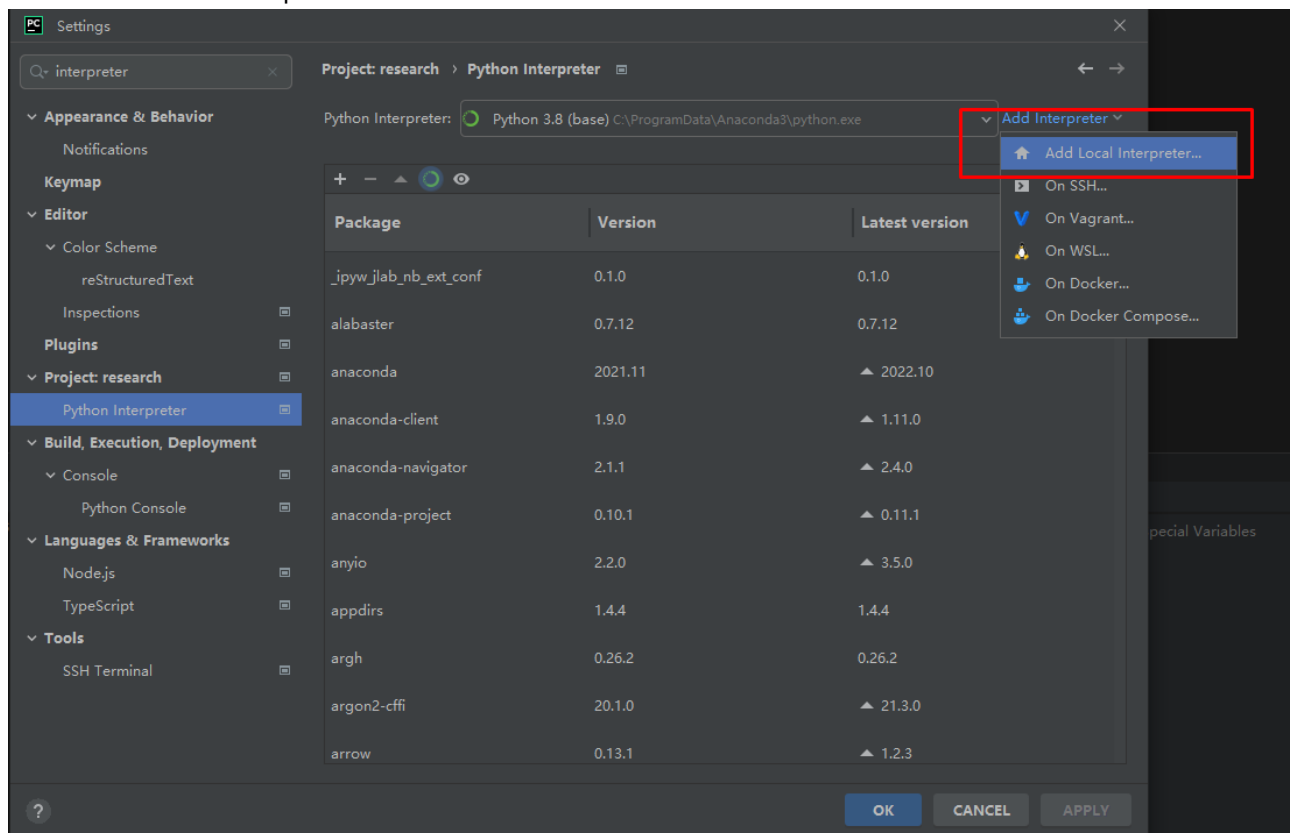

1. When first open Pycharm, remember to grant Internet access for it.

2. Goto File->settings, type 'interpreter' in the search box, then select 'Python Interpreter'. On the right top of the window, click 'Add Interpreter'

3. Select 'Add Local Interpreter'

4. In the following window, you can either select an existing 'Conda Environment'(remember to check the 'Use existing environment') or use 'System Interpreter' and select your conda or python file manually.
